User Stories:

1. As a User I want an overview of all the company's customers, so that I can keep an eye of our customer base.
2. As a User I want an option to add a new customer to our company list so that we as a company can remain up to date with our customers.
3. As a User I want to create customer orders, so that the customer purchases can be applied and processed.
4. As a User I want a list overview of all available products in storage, so that we can keep a track on our product catalogue.
5. As a User I want to be able to add new product deliveries to stock, so that our stock is up to date and in line with the warehouse.

Requirements

Requirement 1:

As our customer want the availability to see a list of customers, we need to provide a page with a comprehensive list of customers containing name, address, e-mail & phone numbers

- ✓ Button for Customer list that is available on the main menu
- ✓ Customer list to display all the company's customers in the database
- ✓ Customer list should display the customer's name, (with addition of E-mail, Address & Phone number)

Requirement 2:

As the user want to be able to create new orders for the customer, when the user creates an order, he/she need to be able to choose a type of product and the amount he/she wishes for. Then to apply the order to the customer -> Order move to warehouse -> Order created and saved to backlog

- ✓ Navigation to merchandise page, with the option to create an order.
- ✓ Button to start the order creation
- ✓ A choice to be able to pick what product the customer wishes for, the number of products (should not be able to exceed what is in stock)
- ✓ Able to apply the order with a confirmation button
- ✓ Receive visual confirmation of the order
- ✓ Save order to backlog/History

Requirement 3:

Users want to be able to see a list of company's current stock, providing a comprehensive list of all available products.

Requirement 4:

The user wants to be able to an inventory of available products, Using Stock status to see the products in stock displayed.

- ✓ Click a button from the main menu to navigate to stock view/status
- ✓ The Stock need to contain the available products for display/a list
- ✓ The view needs to contain each product current amount in stock
- ✓ Organized labels -> click name -> Alphabetical order

Requirement 5:

The user receives new product/deliveries to the warehouse, the need for an "add" button for restocking products, the stock will then be updated according to the delivery content.

- ✓ The user can navigate to stock from main page and press a button "restock/add delivery"
- ✓ The "restock/add delivery" button require the user too choose the product type and amount needed.
- ✓ When input the current stock updates according to the request // input.
- ✓ The user receives a confirmation (visual) that the "restock/delivery" has been added
